

Claims: I claim:

1. A fascia board installing apparatus adapted to be temporarily attached to a support of a roof, or a structure attached thereto, comprising:
 2. U-shaped bucket with adjustment,
 3. a rectangular shaped frame,
 4. means for cooperatively engaging said U-shaped bucket to said rectangular shaped fascia board,
 5. said U-shaped bucket including a base between a first substantially perpendicularly disposed arm, said first substantially perpendicularly or angled disposed arm adapted to receive an end or intermediate part of the fascia board,
 6. said rectangular shaped frame including an upper wall, a lower wall, a first side wall and a second side wall; said walls thereby forming a channel providing means for temporarily attaching said apparatus to said structure attached to said support of said roof, said channel of said rectangular shaped frame also having adjustable clamping means thereon,
 7. said rectangular shaped frame further including a first substantially vertically disposed member and a second substantially vertically or angled disposed member extending downwardly from said lower wall of said rectangular shaped frame; said first substantially vertically disposed member extending linearly from said first side wall, said second substantially vertically or angled disposed member extending symmetrically from said lower wall,
 8. said means for cooperatively engaging said U-shaped frame to said rectangular shaped frame including said first substantially vertically extending arm of said rectangular shaped frame engagingly juxtaposed along said first

substantially perpendicularly or angled disposed arm of said U-shaped frame, thereby clasping said U-shaped frame and said rectangular shaped frame cooperatively.

9. Whereby, upon attaching said apparatus to said support of said roof, or said structure attached thereto, said fascia board is supported while said fascia board is being installed; and after said fascia board is installed said apparatus providing yieldable means for removing said apparatus.

10. A fascia board installing apparatus of claim 1 wherein,

11. said means for temporarily attaching said apparatus to said structure includes said apparatus temporarily attached to an outrigger of a gable end of said roof,

12. and upon receiving said end or said intermediate part of said fascia board; said first substantially perpendicularly or angled disposed arm thereby provides support for said fascia board during said installation thereof upon said gable end of said roof.

13. Fascia board installing apparatus as described in claim 1 wherein,

14. said means for temporarily attaching said apparatus to said structure includes said apparatus temporarily attached to a rafter of an eaves segment of said roof,

15. and, upon receiving said end or intermediate part of said fascia board; said first substantially perpendicularly disposed arm, thereby provides support for said fascia board during said installation thereof upon said eaves segment of said roof.

16. An apparatus as set forth in claim 2, wherein said yieldable support includes a hinged member attached to said first side wall of said rectangular shaped frame.
